Date: June 30, 2010

Re: establish public hearing date for the following;

Hummock Pond Watershed Protection District  
&  
Local Regulation 55.00

Town of Nantucket Board of Health Regulations; Inspection and upgrading of substandard onsite sewage disposal systems within the Hummock Pond water shed protection district.

Please find enclosed;

1. A map of the proposed Hummock Pond Watershed Protection District as originally provided by the engineering firm of Horsley and Whitten and as reviewed and approved by the DEP sponsored Massachusetts Estuaries Program.

This map delineates the boundaries of the water recharge area for Hummock Pond and is divided into 2 areas, A & B. Systems within area A will have 36 months (3 years) to have inspections completed while area B, an area of less eminent impact to the pond, will have 48 months ( 4 years) to have their inspections completed.

2. A copy of the propose Local Regulation 55.00.  
These regulations are modeled after the current system inspection regulations for both the Nantucket Harbor Watershed Protection District and the Madaket Harbor Watershed Protection District. The only substantive changes are to the Zone A & Zone B's inspections completion dates. The Department realized during the inspections phase of the two existing watershed inspection regulations that, both the Department and Local Inspectional man power required additional time than was allocated within the original regulations. We have therefore allocated an additional year to each zones inspection deadlines

Public hearing date requested – August 12<sup>th</sup> 2010
